Dear Hiring Manager,

I am writing to express my strong interest in the Backend Software Engineer position at Splunk. With a Bachelor of Science in Computer Science from Simon Fraser University and extensive experience in software development, including an 8-month internship as a Software Developer at Redmane Technology, I am excited about the opportunity to contribute to Splunk's mission of building a safer and more resilient digital world.

During my internship, I collaborated closely within a dynamic team to develop cutting-edge applications, which fostered a collaborative environment and accelerated project timelines. I also designed and implemented a full-stack solution utilizing technologies such as ReactJS, Node.js, Express.js, SQL, and TypeScript. My commitment to client success was evident in my direct engagement with clients, gathering requirements, and providing timely project updates.

My projects, such as the 2D Arcade Game developed in Java and the iMusic Apple Music Streaming Client developed using SwiftUI and XCode, showcase my skills in software development and my ability to work effectively in a team environment. Additionally, my experience in collaborative software development and algorithm optimization through teamwork, as demonstrated in the Rubik's Cube Solver project using Python3 and Artificial Intelligence, aligns with the collaborative and innovative culture at Splunk.

I am particularly drawn to Splunk's mission of making data accessible, usable, and valuable to everyone. My passion for outstanding technology leadership and my ability to work on highly scalable systems that handle large volumes of data make me excited about the opportunity to contribute to Splunk's innovative projects.

Thank you for considering my application. I am looking forward to the possibility of contributing to Splunk and am available at your earliest convenience for an interview.

Warm regards,

Harmeet Rai
